1.Android四大组件之——Activity(一)定义、状态和后退栈(图文详解)

2.Android四大组件之——Activity的生命周期(图文详解)

3.Android四大组件之——Activity的开启StartActivity()和StartActivityForResult()(图文详解)

前两次学习了Activity的基本概念和生命周期,今天学习一下Activity的跳转和值传递。

如需转载请在文章开头处注明本博客网址: http://www.cnblogs.com/JohnTsai

废话不多说,开始学习!

• Activity的开启

开启一个新的Activity有两种方法:

[Android四大组件学习系列Activity篇]

startActivity(Intent)和startActivityForResult(Intent,int)。

startActivity(Intent):

用于开启一个新的Activity,新Activity压入栈顶。参数Intent用于描述新Activity。

startActivityForResult(Intent,int):

用于开启新Activity,新Activity退出后,返回结果给旧Activity。

startActivity好理解,startActivityForResult()就麻烦一点,下面这张图方便我们的理解:

积分 - 42316 排名 - 5160

说明一下:

requestCode,请求码,自己随意设置,但必须是非负数。只有是非负数时,Activity退出时,这个码会返回到onActivityResuresultCode,结果码,用于标识返回数据来自于哪个新Activity,它的值一般是

RESULT_CANCELED, RESULT_OK, RESULT_FIRST_USER.

写了一个关于开启Activity的Demo:

共三个Activity: MainActivity用户填写用户姓名电话城市、CityActivity用于用户选择城市,ShowActivity用于展示用户信息。 MainActivity:

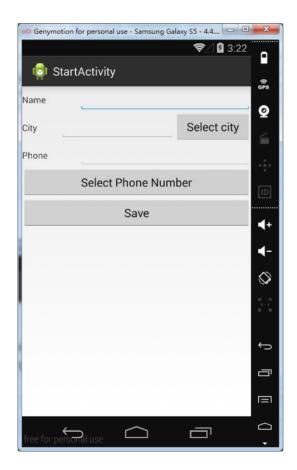

```
1 package com.johntsai.startactivity;
 3 import android.app.Activity;
 4 import android.content.Intent;
 5 import android.database.Cursor;
 6 import android.net.Uri;
